Education

B.Sc. Hons. in Game Design and Animation

Mysore University, Arena Animation
Jayanagar, Bengaluru
2023 - 2026 (pursuing)

Diploma in Animation and VFX

Arena Animation Jayanagar, Bengaluru
2021-2023

Skills

Programming Languages:

- C#
- C++

Game Engines:

- Unity
- Unreal Engine
- Godot

Core Development Concepts

- Object-Oriented Programming (OOP)
- Data Structures and Algorithms
- State Machines & Gameplay Architecture
- Object Pooling & Performance Optimization
- Procedural Generation Systems
- Physics & Collision Systems
- UI Systems & Game Flow Design

Tools & Software

- Git & GitHub (Version Control)
- Blender, Autodesk Maya
- Visual Studio

Language

English Hindi
Telugu Kannada

Shanmukha Srinivasa

GAME DEVELOPER

I am a passionate Game Development student primarily building 2D and 3D games using Unity and C#. I am actively expanding my programming toolkit by learning C++, Unreal Engine, and Godot.

Projects

Orbit Rogue | Unity, C#

Jan 2026

Playable Build: [Orbit Rogue by Shanmukha](#)

- Engineered a complete single-mechanic gameplay loop from concept to deployment, publishing the final build on itch.io.
- Programmed core player movement and state management using C# to ensure responsive and fluid user experience.
- Designed and implemented UI elements, integrating them seamlessly with the game's underlying logic.

Pixel Dash - Endless Runner | Unity, C#

Sep 2025

Playable Build: [Pixel Dash by Shanmukha](#)

- Developed and published a 2D endless runner game on itch.io, focusing on scalable difficulty and infinite procedural generation.
- Handled the integration and animation logic for the 'Pixel Prototype Player Sprites' asset pack to create engaging character movement.
- Programmed physics-based collision detection, score persistence, dynamic obstacle spawning.

Arcane Ascent | Unity, C#

Feb 2026

Playable Build: [Arcane Ascent by Shanmukha](#)

- Served as a Lead Developer for a 2D puzzle-platformer centered around time-management and precision movement mechanics.
- Engineered a custom 2D character controller alongside object-pooled platform conjuring system to optimize performance.
- Implemented a dynamic camera system and integrated shader-based visual cues to clearly indicate platform expiration times to the player.

Modular Health System Prototype | Unity, C#

April 2026

Playable Build: [Health System Prototype](#)

- Engineered a scalable, designer-friendly combat system using C# Scriptable Objects to externalize item data and weapon logic.
- Optimized performance and code maintainability by decoupling the mathematical health engine from the visual UI using Unity Events.
- Implemented a Dictionary-based Coroutine manager to safely handle overlapping damage-over-time status effects without memory leaks.
